## Board of Regional Editors

- Prof. FRED KARUSH (Chairman of the Board), Department of Microbiology, School of Medicine, University of Pennsylvania, Philadelphia, PA 19174, U.S.A.
- Prof. GORDON L. ADA, Microbiology Department, The John Curtin School of Medical Research, P.O. Box 334, Canberra City, A.C.T. 2601, Australia.
- Prof. ALAIN BUSSARD, Institut Pasteur, 25 rue du Docteur Roux, Paris, France.
- Prof. HENRI ISLIKER, Université de Lausanne, Institut de Biochimie, Chemin des Boveresses, CH-1066, Epalinges, Switzerland.
- Prof. MARIAN E. KOSHLAND, Department of Bacteriology and Immunology, University of California, Berkeley, CA 94720, U.S.A.
- Dr. ROALD S. NEZLIN, Institute of Molecular Biology, Academy of Science, Vavilov str. 32, Moscow W-334, U.S.S.R. 117984.

## Editor for Book Reviews

- Dr. ARNOLD FEINSTEIN, Agricultural Research Council, Institute of Animal Physiology, Babraham, Cambridge CB2 4AT, England.

## Founding Editor

Prof. DAN H. CAMPBELL

## Advisory Editors

## Publishing and Advertising Offices

Pergamon Press Ltd., Headington Hill Hall, Oxford, OX3 0BW, England  
Pergamon Press Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, U.S.A.

Published monthly

Annual Subscription Rates 1980

For libraries, university departments, government laboratories, industrial and all other multiple-reader institutions: \$187.00. Two-year rate: (1980/81): \$355.30. These rates are inclusive of postage and insurance. Subscription enquiries from customers in North America should be sent to: Pergamon Press Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, U.S.A., and for the remainder of the world to: Pergamon Press Ltd., Headington Hill Hall, Oxford OX3 0BW, U.K.

## Specially Reduced Rates to Individuals

In the interests of maximizing the dissemination of the research results published in this important international journal, we have established a two-tier price structure. Any individual, whose institution takes out a library subscription, may purchase a second or additional subscription for personal use at the reduced rate of \$45.00 per annum.

## Microform Subscriptions and Back Issues

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition and on microfilm on completion of the annual index at the end of the subscription year.

Copyright © 1980 Pergamon Press Ltd.

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. However, assignment of copyright is not required from authors who work for organizations which do not permit such assignment. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photostored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the copyright holder.

## U.S. COPYRIGHT LAW APPLICABLE TO USERS IN THE U.S.A.

The Article Fee Code on the first page of an article in this journal indicates the copyright owner's consent that in the U.S.A. copies may be made for personal or internal use provided the stated fee for copying beyond that permitted by Section 107 or 108 of the United States Copyright Law is paid. The appropriate remittance should be forwarded with a copy of the first page of the article to the Copyright Clearance Center Inc., PO Box 765, Schenectady, NY 12301. If a code does not appear copies of the article may be made without charge, provided permission is obtained from the publisher. The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works or for resale. Specific written permission must be obtained from the publisher for such copying. In case of doubt please contact your nearest Pergamon office.

#### iii Editorial

##### 1 Introduction

3 Further structural analysis of the murine H-2K<sub>b</sub>  
glycoprotein using radiochemical methodology

9 Biochemical purification of detergent-solubilized H-2  
alloantigens

23 Localization of the disulfide bridges of human histo-  
compatibility antigens

29 Structural studies on the murine Ia alloantigens—III.  
Tryptic peptide comparisons of allelic products of the  
I-E/C sub-region

37 Structural studies of murine I-E and human DR antigens

43 Further chemical characterization of guinea pig Ia  
molecules derived from the three major classes of  
immunocompetent cells

51 Detection of a common polypeptide chain in I-A and  
I-E sub-region immunoprecipitates

61 Amino terminal sequence studies on the Ia antigens of  
the guinea pig

67 Characterization of major histocompatibility antigens  
on trinitrophenyl-modified cells

## FEBRUARY

R. Notenboom, S. Dubiski, B. Cinader  
and B. Underdown

M. Dy, M. Debray-Sachs, P. Kamoun  
and J. Hamburger

M. Dy, M. Debray-Sachs, P. Kamoun  
and J. Hamburger

M. K. Das, D. G. Streefkerk and  
C. P. J. Glaudemans

M. E. Frankel and W. Gerhard

R. T. Kubo, K. M. Yamaga and  
R. E. Moore, Jr.

N. Swaminathan, J. Rasor and  
G. D. Braunstein

S. S. Asghar and A. Kammeijer

M. M. Ogievetskaya

J. E. Coligan and H. S. Slayter

77 Allotype related charge differences between immuno-  
globulins and light chains from rabbits differing at the  
Ab locus

85  $\beta$ -glucuronidase in macrophages of skin-allografted  
mice—I. Decrease in  $\beta$ -glucuronidase in allografted  
mouse peritoneal cells in the presence of donor cells

91  $\beta$ -glucuronidase in macrophages of skin-allografted  
mice—II. Demonstration of a lymphokine decreasing  
macrophage  $\beta$ -glucuronidase in allograft immunity

97 The binding of inulo-oligosaccharides to homogeneous  
immunoglobulins E109 and A47N

101 The rapid determination of binding constants for  
antiviral antibodies by a radioimmunoassay. An analysis  
of the interaction between hybridoma proteins and  
influenza virus

107 Differential affinity of murine lymphocyte membrane  
IgM and IgD for the lentil lectin

113 Preparation and properties of high titer antisera against  
the beta sub-unit of human chorionic gonadotropin

117 Interaction of phenothiazine sulphonate and chloro-  
phenothiazine sulphonate with the B-determinant of  
the third component of complement (C3)

123 Immunogenicity of proteins and their evolution rate

129 Physical, chemical and immunological characterization  
of saline-extracted, concanavalin A-purified carcino-  
embryonic antigen

| D. Male and I. M. Roitt                                    | 197 | Analysis of the components of immune complexes   |
| J. Apold and S. Elsayed                                    | 205 | Characterization of the immunological cross reactivity of fragments TM 1 and TM 2 of Allergen M from cod   |
|  |     | <i>Announcements</i>   |
|  | 213 | The IVth Annual Advanced Institute in Methods of Immunological Diagnosis   |
|  |     | Immunobiology of Erythrocyte Destruction   |
|  | 214 | Erratum  |
|  | 215 | Calendar of Immunology Meetings 1979/1980.   |

## APRIL

- |  |     |  |
|--|-----|--|
| <b>J. P. Salier, H. Sarvas, H. M. Reisner, A. C. Wang and H. H. Fudenberg</b>      | 217 | Quantitative studies of Gm allotypes—III. Some effects of IgG aggregation in radioimmunoassays using human IgM and rabbit IgG anti-Gm antibodies   |
| <b>J. Eng and M. Reichlin</b>  | 225 | Fractionation of rabbit anti-horse cytochrome c—I. Specificity of the isolated fractions   |
| <b>R. Jefferis, L. Chambers and A. Jehanali</b>                                    | 231 | Pronase digestion of human IgG and Fc $\delta$   |
| <b>G. R. Bordenave and F. Stoltz</b>   | 237 | Allotypic and idiotypic specificities of rabbit antibodies showing simple spectrotpe   |
| <b>T. Svenberg, S. Hammarström and A. Hedin</b>                                    | 245 | Purification and properties of biliary glycoprotein (BGP I). Immunochemical relationship to carcinoembryonic antigen                               |
| <b>D. R. Schultz, P. I. Arnold, M-C. Wu, T. M. Lo, J. E. Volanakis and M. Loos</b> | 253 | Isolation and partial characterization of a polysaccharide in ant venom ( <i>Pseudomyrmex</i> sp.) that activates the classical complement pathway |

- H. E. Hart and E. B. Greenwald** 265 Scintillation proximity assay (SPA)—a new method of immunoassay. Direct and inhibition mode detection with human albumin and rabbit antihuman albumin
- C. H. Schneider, E. Gruden, M. Wälti, O. Toffler, A. L. de Weck and R. Jost** 269 Monovalent elicitation of passive cutaneous anaphylaxis by  $N^1$ -DNCP- $N^6$ -BPO-diaminohexane
- G. A. Leslie** 281 Expression of a cross reactive idiotypic on the IgG<sub>2c</sub> subclass of rat anti-streptococcal carbohydrate antibody

## MAY

- E. A. Padlan** 287 Evaluation of the structural variation among light chain variable domains
- B. Zalc, P. Dupouey, M. J. Coulon-Morelec and N. A. Baumann** 297 Immunogenic properties of glucosylceramide
- H. E. Prince, J. D. Folds and J. K. Spitznagel** 301 Interaction of human polymorphonuclear leukocyte elastase with human IgM. *In vitro* production of an Fab $\mu$ -like fragment
- M. D. P. Boyle, J. J. Langone and T. Borsos** 307 1,10-Phenanthroline mediated hemolysis—evidence that 1,10-phenanthroline does not substitute specifically for C9
- A. M. Poverenny, V. K. Podgorodnichenko, L. E. Bryksina, G. S. Monastyrskaya and E. D. Sverdlov** 313 Immunochemical approaches to DNA structure investigation—I. Immunochemical identification of the product of cytosine modification with bisulphite and O-methyl-hydroxylamine mixture
- M. Stanislawski, M. Mitard and A. Harel** 317 An assay for the quantitative inhibition of anti-immunoglobulin antibodies performed at the cell surface. Studies with anti- $\kappa$  and anti- $\mu$  chain antibodies
- M. Lefroit-Jolij, R. Lebar and G. A. Voisin** 327 Guinea-pig spermatozoal plasma membrane T auto-antigen. Attempts at solubilization, purification and characterization
- G. Sundblad, H. Jörnvall and S. Hammarström** 335 Structural and antigenic properties of carcinoembryonic antigen (CEA)
- P. R. Anderas, D. Paul, J. T. Tomita and B. Anderson** 341 Preparation and specificities of antisera to  $\beta 1 \rightarrow 4$  linked N-acetyl-D-glucosamine oligosaccharides  
*Preliminary Communication*
- G. De Benedictis** 347 Immunochemistry of two polymorphic antigens identified in sheep serum (*Ovis aries*)  
*Announcement*
- 351 The First International Conference on Immunopharmacology

## JUNE

- T. J. Kunicki and R. H. Aster** 353 Isolation and immunologic characterization of the human platelet alloantigen, PIA<sup>1</sup>
- R. W. Rosenstein, J. B. Zeldis, W. H. Konigsberg and F. F. Richards** 361 The location and expression of idiotypic determinants in the immunoglobulin variable region—I. Characterization of antibodies directed against the variable region of mouse myeloma immunoglobulins 315 and 460
- J. B. Zeldis, W. H. Konigsberg, F. F. Richards and R. W. Rosenstein** 371 The location and expression of idiotypic determinants in the immunoglobulin variable region—II. Chain location of variable region determinants
- W. Hertl and G. Odstrchel** 379 Kinetic and thermodynamic studies of antigen-antibody interactions in heterogeneous phase reaction systems—II. Interaction of L-triiodothyronine (L-T<sub>3</sub>) with specific antibody immobilized on controlled-pore glass
- P. H. Seidl and K. H. Schleifer** 385 The immunochemistry of peptidoglycan. Serological detection of a difference in a single N-terminal amino acid

- F. Franěk, M. A. Saber, J. Doskočil, J. Novotný and G. Füst** 389 Non-antibody components in porcine anti-DNP antibody preparations obtained by affinity chromatography
- B. Goldstein and A. S. Perelson** 395 The effect of indicator layer thickness on the interpretation of hemolytic plaque results
- J. B. Matthews and R. Jefferis** 401 Studies on intact variable regions and variable region sub-fragments isolated from a human kappa Bence-Jones protein (sub-group I)
- N. Guiso, J.-C. Hubert and A. Ullmann** 409 Immunological relatedness between  $\beta$ -galactosidases of different bacterial origins
- W. Ebert, J. Fey, Ch. Gärtner, H. P. Geisen, U. Rautenberg, D. Roelcke and H. Weicker** 413 Isolation and partial characterization of the Pr auto-antigen determinants
- R. Kleine, M. Klapperstück, A. I. Chukhrova and V. A. Lapuk** 421 Affinity chromatography of a myeloma immunoglobulin M and its tryptic Fab and (Fc)<sub>5</sub> fragments using lectins covalently coupled to Sepharose 4B
- D. A. Cunliffe and K. O. Cox** 427 Effects of bromelain and pronase on erythrocyte membranes
- P. Rosen, I. Pecht and J. S. Cohen** 435 *Preliminary Communication*  
Monitoring the carbohydrate component of the Fc fragment of human IgG by <sup>13</sup>C nuclear magnetic resonance spectroscopy
- 437 *Book Review*  
Protides of the Biological Fluids—25th Colloquium 1977 (Reviewed by A. L. Grossberg)

## JULY

- Y. Nabeshima and T. Ikenaka** 439 Primary structure of cryo Bence-Jones protein (Tog) from the urine of a patient with IgD myeloma
- G. J. Arlaud, R. B. Sim, A.-M. Duplaa and M. G. Colomb** 445 Differential elution of Cl<sub>q</sub>, C1<sub>r</sub> and C1<sub>s</sub> from human C1 bound to immune aggregates. Use in the rapid purification of C1 sub-components
- S. Sakata and M. Z. Atassi** 451 Immunochemistry of serum albumin—V. A time-dependent examination of the antibody response to bovine serum albumin by the activity of its third domain
- A. L. Kazim, A. F. S. A. Habeeb and M. Z. Atassi** 457 Immunochemistry of serum albumin—VII. Effects of chemical modification of tyrosine and arginine residues on the conformation and immunochemistry of a fragment corresponding to the last third of bovine serum albumin
- D. N. Misra and T. J. Gill III** 465 Isolation and characterization of immunoglobulin from thymocytes of inbred rats
- A. G. Pardo, M. E. Lamm, A. G. Plaut and B. Frangione** 477 Secretory component is covalently bound to a single sub-unit in human secretory IgA
- M. Schwartz, D. Lancet, R. Tarrab-Hazdai and S. Fuchs** 483 Effect of azathioprine on the affinity of antibodies against acetylcholine receptor: analysis with purified antibodies
- I. Říha, V. Hašková, J. Kašík, M. Maierová and J. Stránský** 489 The use of polyethyleneglycol for immune complex detection in human sera
- J. N. Whitaker, C.-H. J. Chou, F. C.-H. Chou and R. F. Kibler** 495 Antigenic regions for the humoral response to myelin basic protein
- K. Onishi, G. Sugihara and M. Tanaka** 503 An analysis of the moving boundary problem associated with the gel diffusion method
- F. C. Denizot, M. H. Hirn and M. A. Delaage** 509 Relationship between affinity and kinetics in a hapten-antibody reaction. Studies on anti-cyclic AMP antibodies

- Speculation*
- A. Danchin 515 The specification of the immune response: a general selective model
- Communications to the Editors*
- L. S. Rodkey, W. Schalch and D. G. Braun 527 Lytic and non-lytic activity associated with clonally distinct IgG antibodies
- A. K. Bhattacharjee, K. J. Kwon-Chung and C. P. J. Glaudemans 531 On the structure of the capsular polysaccharide from *Cryptococcus neoformans* serotype C—II
- Book Review*
- R. N. Hiramoto 533 The Immunobiology of Proteins and Peptides I—Edited by M. Z. Atassi and A. B. Stavitsky

## AUGUST

- M. J. Nelles, R. L. Proia, D. A. Hart, L. Eidels and J. W. Streilein 535 Unusual cell surface immunoglobulin on a plasma cell tumor
- L. Eidels, R. L. Proia, J. W. Streilein and D. A. Hart 541 Cell surface immunoglobulin of hamster lymphoid cells
- D. Hudig and S. Sell 547 Isolation, characterization and radioimmunoassay of rat alpha-macroglobulin (acute phase A<sub>2</sub> macroglobulin)
- C. E. Cook and A. G. Steinberg 555 An amino acid substitution in the  $\gamma 1$  chain of human immunoglobulin G associated with the Gm(2) allotype
- J. Apold and S. Elsayed 559 The effect of amino acid modification and polymerization on the immunochemical reactivity of cod Allergen M
- L. J. McCumber and J. D. Capra 565 The complete amino-acid sequence of a canine mu chain
- C. Jacobsen and J. Steensgaard 571 Evidence of a two stage nature of precipitin reactions
- L. Lögdberg, P.-O. Östergren and I. Berggård 577 Rat  $\beta_2$ -microglobulin. Isolation, properties and relation to  $\beta_2$ -microglobulins from other species
- A. Chersi, E. Appella, S. Carta and R. Mage 589 The amino acid sequence of a variable region of rabbit b4 light chain from an anti-SIII antibody: comparison with light chains of the same sub-group from anti-A-variant carbohydrate antibodies
- K. A. Kelly, A. H. Sehon and H. Bazin 597 Standardization of radioimmunoassay: differences in reactivity of rat IgEs with antibodies to a monoclonal IgE
- J. K. Roche, V. A. Varitek, H. D. Hill and E. D. Day 609 Specificity and T-lymphocyte dependence of the humoral immune response in the rat to purified ovine and porcine mucins
- Preliminary Communications*
- A. A. Luderer, A. R. Zine, D. M. Hess, J. N. Henyan and G. Odstrchel 621 Rapid, quantitative human lymphocyte separation and purification in a closed system
- A. R. Neurath and N. Strick 625 <sup>125</sup>I-Labeled anti-2,4-dinitrophenyl (DNP)-antibodies: a universal reagent for solid phase radioimmunoassays
- Announcement*
- 629 Second International Conference on Diagnostic Immunology

## SEPTEMBER

- D. J. Selig and O. P. Chilson 631 Antigenic structure of AMP-deaminase: Immuno-inhibition by goat and rabbit antibodies and univalent fragments: quantitative precipitation of chicken and rabbit muscle enzymes by rabbit antibodies. Binding of avian and mammalian enzymes to antibody-Sepharose

- N. R. Ling, G. Stephens,  
P. Bratt and H. S. Dhaliwal
- J. Mikulska, M. Ugorski, G. Skibiński,  
Z. Wiczorek and J. Lisowski
- H. K. Forster and M. Sela
- J. B. Zeldis, R. Riblet, W. H. Konigsberg,  
F. F. Richards and R. W. Rosenstein
- G. Mistrello, R. Cricchio, G. Bolzoni,  
M. Mosca and L. Bassi
- M. K. Toth and G. A. Granger
- M. F. M. Johnston, I. Pecht,  
J. M. Sturtevant and B. G. Barisas
- A. Shimizu, S. Watanabe,  
C. Kiyotaki and Y. Yamamura
- N. C. Hughes-Jones and B. Gardner
- S. Sakata, R. G. Reed, T. Peters, Jr.  
and M. Z. Atassi
- D. L. Wassom, D. A. Loegering and  
G. J. Gleich
- P. H. Plotz, R. P. Kimberly,  
R. L. Guyer and D. M. Segal
- M. D. Poulik and O. Smithies
- G. W. Warr, D. DeLuca and  
J. J. Marchalonis
- 637 Attachment of antigens and antibodies to fixed red cells; their use in rosette and haemagglutination tests; a comparison with fresh red cells
- 643 Synthetic antigens—V. Properties of rabbit antibodies against a synthetic antigen: interpolymers of styrene and maleic acid
- 651 Conformational changes induced in anti-poly (L-prolyl) antibodies by oligoproline haptens of different sizes
- 657 The location and expression of idiotypic determinants in the immunoglobulin variable region—III. Expression of the protein 315 and 460 idiotypic determinants in mouse anti-Dnp antibodies
- 665 Immunogenicity of rifamycins
- 671 The human lymphotoxin system—VI. Identification of various saccharides on LT molecules and their contribution to cytotoxicity and charge heterogeneity
- 681 The distribution of hapten binding enthalpies in conventionally-raised antibody populations
- 691 Radioimmunoassay for detection of IgM domains
- 697 Reaction between the isolated globular sub-units of the complement component C1q and IgG complexes
- 703 Immunochemistry of serum albumin—VIII. The antigenic reactivity of the third domain of bovine serum albumin resides in the last sub-domain. A dynamic examination of the change of antibody affinity and specificity
- 711 Measurement of guinea pig eosinophil major basic protein by radioimmunoassay
- 721 Stable model immune complexes produced by bivalent affinity labeling haptens: *in-vivo* survival
- Communication to the Editors
- 731 Partial amino acid sequences of rabbit and rat  $\beta_2$ -microglobulins
- Preliminary Communication
- 735 The immunoglobulin-like T-cell receptor. III. Binding of the arsonate hapten by idiotype-bearing T cells and antibody is blocked by avian antibody to (Fab')<sub>2</sub>
- Book Review
- 739 Human Interferon: Production and Clinical Use—Advances in Experimental Medicine and Biology, Vol. 110 (Reviewed by J. A. O'Malley)

# OCTOBER

- C. Fewtrell, M. Geier, A. Goetze,  
D. Holowka, D. E. Isenman,  
J. F. Jones, H. Metzger, M. Navia,  
D. Sieckmann, E. Silverton and  
K. Stein
- G. Singh, H. Bazin and  
C. T. Ladoulis
- R. A. Harrison and P. J. Lachmann
- A. A. Luderer, D. M. Hess and  
G. Odstrchel
- 741 Mediation of effector functions by antibodies: report of a workshop
- 755 *In-vitro* synthesis and release of immunoglobulins by thymocytes of inbred rats
- 767 An improved purification procedure for the third component of complement and  $\beta$ 1H globulin from human serum
- 777 Detection and molecular specificity of murine thymocyte receptors for GAT in responder and non-responder mice utilizing a microradioreceptor assay

- T. C. McGuire, B. G. Archer and T. B. Crawford** 787 Equine IgG and IgG(T)antibodies: dependence of precipitability on both antigen and antibody structure
- Y. Inokuchi and Y. Nagai** 791 Immunochemical characterization of mouse brain-associated theta (Thy-1) antigen
- J. Anner and M. Raftell** 797 Immunochemical characterization of esterase active antigens in rat liver microsomes
- K. M. Wang and M. Reichlin** 805 Antigenic determinants of horse cytochrome c for lymphocyte transformation: identification of an immunodominant peptide
- E. Wood, J. Lecomte, R. A. Childs and T. Feizi** 813 A radioimmunoassay for the measurement of blood group li activities: its application to glycoconjugates, oligosaccharides and intact cells
- N. R. Cooper and R. J. Ziccardi** 821 Amyloid P-component(Clt) and complement: lack of physical or functional relationship
- Communication to the Editors*
- S. L. Jones, L. E. Cannon and P. D. Gottlieb** 829 Digestion of a mouse  $\lambda_1$  chain with staphylococcal protease yields a large V-region fragment accessible to direct amino acid sequence analysis
- Preliminary Communications*
- A. Chersi, R. G. Mage and C. B. Alexander** 833 Partial sequence of the variable region of IgG light chains of b5 allotype from a b<sup>4b5</sup> rabbit
- D. Delacroix and J. P. Vaerman** 837 Simple purification of goat IgG1 and IgG2 subclasses by chromatography on protein A-Sepharose at various pH

## NOVEMBER

## The Structure and Function of the Constant Region: a Symposium

Guest Editor: K. J. Dorrington

- R. P. Phizackerley, B. C. Wishner, S. H. Bryant, L. M. Amzel, J. A. Lopez de Castro and R. J. Poljak** 841 Three dimensional structure of the pFc' fragment of guinea pig IgG1
- J. Boyd, S. B. Easterbrook-Smith, P. Závodszy, C. Mountford-Wright and R. A. Dwek** 851 Mobility and symmetry in the Fc and pFc' fragments as probed by <sup>1</sup>H NMR
- D. G. Romans, C. A. Tilley and K. J. Dorrington** 859 Interactions between Fab and Fc regions in liganded immunoglobulin G. A study employing the antigenic polymorphism and multivalency of the human red-cell membrane
- M. Fechheimer, J. L. Daiss and J. J. Cebra** 881 Interaction of immunoglobulin with actin
- J. F. Jones, P. H. Plotz and D. M. Segal** 889 Complement and cell-mediated lysis of haptenated erythrocytes sensitized with oligomers of rabbit IgG antibody
- P. Závodszy, S. B. Easterbrook-Smith and R. A. Dwek** 899 The isolation of a globular fragment of rabbit immunoglobulin G probably corresponding to the intact C $\gamma$ 2 homology region
- R. Brunhouse and J. J. Cebra** 907 Isotypes of IgG: comparison of the primary structures of three pairs of isotypes which differ in their ability to activate complement
- E. C. Franklin, R. Kyle, M. Seligmann and B. Frangione** 919 Correlation of protein structure and immunoglobulin gene organization in the light of two new deleted heavy chain disease proteins
- T. Hofmann and D. M. Parr** 923 A note on the amino acid sequence of residues 381-391 of human immunoglobulin gamma chains

	General Papers
A. Malley, D. Begley and A. Forsham	929 Chemical modification of timothy grass pollen antigen B—I. Loss of antibody binding properties
L. Ramanathan, R. B. Guyer, W. W. Karakawa, E. G. Buss and C. O. Clagett	935 Immunochemistry of the glycopeptide derived from avian riboflavin-binding protein
A. F. Esser	943 The action of chelating agents and local anesthetics on the terminal stages of immune hemolysis
G. A. Medgyesi, G. Füst, J. Gergely and J.-C. Jaton	949 Activation of the classical complement pathway by homogeneous anti-SIII antibody bound to bivalent or trivalent oligosaccharide antigens
M. Gavish, Y. Ben Neriah, R. Zakut, D. Givol, R. A. Dwek and W. R. C. Jackson	957 On the role of Tyr 34 <sub>L</sub> in the antibody combining site of the dinitrophenyl binding protein 315
R. Verloes, G. Atassi and L. Kanarek	965 Influence of anti- <i>Micrococcus</i> immunoglobulins on the proliferation of normal immunocompetent cells in inbred mice
H. E. Prince, J. D. Folds and J. K. Spitznagel	975 <i>In vitro</i> production of a biologically active Fab <sub>2</sub> -like fragment by digestion of human IgM rheumatoid factor with human polymorphonuclear leukocyte elastase

# DECEMBER

Dedicated to Jacques Oudin on the occasion of his 70th birthday

Guest Editor: Alain E. Bussard

A. Bussard	979 Avant-propos
A. Benammar, C. Brézin and P.-A. Cazenave	983 Rabbit immunoglobulin allotypy: a sixth allele at the b locus (b 95)
S. Dubiski and P. W. Good	989 Autospecific and allospecific antibodies raised in allotype suppressed rabbits
L. Emorine, S. Dutka, P. Paroutaud and A. D. Strosberg	997 The structural correlates of the rabbit light chain b allotypes: sequence studies of b5 and b6 chains
V. T. Oi and L. A. Herzenberg	1005 Localization of murine Ig-lb and Ig-la (IgG <sub>2a</sub> ) allotypic determinants detected with monoclonal antibodies
D. P. Eskinazi, A. Gilman-Sachs, S. Dray and K. L. Knight	1019 Suppression of the paternal IgA-f and IgA-g allotypes in heterozygous rabbits suppressed for the paternal IgM allotype
J. A. Lowe, J. M. Phillips and D. Catty	1025 Clonal heterogeneity and other properties of auto anti-allotype antibodies produced in allotype-suppressed rabbits
O. Abehsira, J.-C. Mazie, J.-J. Bourgarit and A. E. Bussard	1031 Functional diploidy for the secretion of the a allotypes by the lymphoid cell of heterozygous rabbits
S. Sell	1045 The rabbit immune system: characterization of cell surface markers and functional properties of rabbit lymphocytes
A. W. Dodds and R. R. Porter	1059 The activation of complement components by aggregates of antibodies and their fragments
I. Garcia and J.-C. Jaton	1063 The immune response to type II and type VIII pneumococcal vaccines in <i>Basilea</i> rabbits lacking K light chains. Immunochemical and partial amino acid sequence studies of the light chains
C. Boyer, C. Schiff, M. Milili and M. Fougereau	1073 Repertoire of the anti-MOPC 173 anti-idiotypic antibodies: genetical and structural features
C. Wuilmart, M. Wikler and J. Urbain	1085 Induction of autoanti-idiotypic antibodies and effects on the subsequent immune response

# Molecular Immunology

## Notes for Contributors

(Revised January 1978)

All manuscripts and material to be published must be sent to a Regional Editor with a covering letter of transmittal stating the category or section of preference in the Journal. The letter should also give the name and address of the person to whom all subsequent correspondence should be directed.

Since this Journal is intended for international participation by investigators in molecular immunology, manuscripts will be published in English, French or German.

The contents of contributions shall be the sole responsibility of the authors. Publication shall not imply the concurrence of the Editors or publishers with the author's interpretations, conclusions or validity of data.

**Submission of manuscripts.** Manuscripts should be sent to one of the regional Editors. Contributions from France should be sent to Professor Bussard; those from Switzerland and the British Isles to Professor Slikker. Manuscripts from other European countries, the Middle East and Africa may be sent to one of the above Editors or Dr. Nezlin. Manuscripts from the Far East, including Japan and Australia, should be sent to Professor Ada. Manuscripts from the Eastern United States and Eastern Canada should be sent to Professor Karush; those from the Western United States, Western Canada, Mexico and South America should be sent to Professor Dorrington. The manuscript and diagrams will be discarded one month after publication unless the publisher is requested to return original material to the author.

**Acceptance and publication.** Manuscripts which are regarded as scientifically sound will be given a priority rating by the reviewers. This rating will determine if the paper is to be accepted for publication and the interval between acceptance and publication. Those papers given the highest rating because of their significance, timeliness or novelty will be published on the average in four months and in not more than six months. Other papers which do not merit the highest priority but are considered as substantial contributions will be published on the average in five months and in not more than seven months. The publication of other manuscripts is subject to the limitations of available space and may, if accepted, take longer than seven months.

**Form of contributions.** All contributions must be submitted in typewritten duplicate and with lines at least double spaced and with margins which provide sufficient space for notations. Submission of three copies of the manuscript will facilitate refereeing and rapid publication. At the discretion of the author an abstract can be submitted with the article in the language of the country of origin of the author. All papers must have an accompanying abstract in English as well as in the language used for the article. Manuscripts dealing with experimental work should be divided into major sections such as: Introduction (optional), Experimental (with Materials, Methods and Results) followed by Discussion, Conclusions and References. If a large number of abbreviations are used e.g. sRNA, EA, Ag, EEM etc., it may be advisable to include a glossary defining such terms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page an abbreviated title should be given for use as a running headline.

**References** should be cited in the text by authors' names and date in parentheses, e.g. Cohen and Eisen (1977). The full references should be cited in an alphabetical list at the end of the paper using the following style:  
Cohen R. J. & Eisen H. N. (1977) Interactions of macromolecules on cell membranes and restrictions of T-cell specificity by products of the major histocompatibility complex. *Cell Immunol.* **32**, 1-9.

Haber E., Margolis M. N. & Cannon L. E. (1977) Structure of the framework and complementarity regions of elicited antibodies. In *Antibodies in Human Diagnosis and Therapy* (Edited by Haber E. & Krause R. M.) p. 45. Raven Press, New York.

**Footnotes.** Statements or references which do not fit into the text of the paper may be quoted by the following symbols: \*, †, ‡, §, starting afresh on each page, e.g. ... crystalline trypsin\*. Footnotes should be typed at the bottom of the page on which they appear.

**Tables.** In the interest of economy and in order to avoid the introduction of errors, tables will be reproduced by photo-offset means directly from the author's typed manuscripts. All tabular material, flow charts etc., should be typed on a separate manuscript page and should be intelligible without reference to the text. Headings should be concise, should clearly present the subject matter, and should be a part of the table. Footnotes to tables should be placed on the same page and designated by superscripts, a, b, c etc., instead of numbers. In case of difficulty, please consult the Photoreprographic Unit of your institution.

**Graphs and illustrations.** Figures and illustrations, which must be kept to a minimum, should be included separately and not as part of the text. They should be about twice the published size and be clearly marked on the back as to top, number and author's name. Particular attention should be given to the size of the lettering to avoid unduly small letters in the published version. Either the original or glossy prints may be used if care is taken in making good reproduction. Immuno-electrophoretic patterns and other optical patterns should normally be provided in the form of photographic reproductions of the actual pattern, not as line drawings. A complete set of labeled figures and illustrations should accompany each copy of the manuscript. Optical patterns (gel diffusion, immuno-electrophoresis, Ouchterlony) should be labeled with symbols which are descriptive of the materials employed and which do not require reference to the legend for their identification. The position of figures or illustrations should be indicated on the manuscript. Legends should be given on a separate page and clearly present enough information to make the figure understandable. The following standard symbols should be used on line diagrams:

○ ● + × □ ■ △ ▲ ▽ ▼

**General considerations.** It is important to all concerned that a manuscript be carefully read for errors and clarity before sending it to an Editor. Presentation of data in duplicate form should be avoided and manuscripts will be scanned for excessive length.

**Reprints.** Where the research is supported by a fund which can be used for page charges, the author is invited to make a voluntary contribution towards publication costs, in which case 100 free reprints are provided. Further reprints in multiples of 100 can be obtained at reasonable cost if ordered before publication, and an order for this purpose will be sent to the author.

**Proofs.** The individual to whom proofs are to be sent should be indicated at the bottom of the title page, together with the complete mailing address. Corrections to the paper at this stage must be restricted to typographical errors. Any substantial alterations may be charged to the author.

**Instructions for the preparation of preliminary communications.** It should be pointed out that the typewritten manuscript is reproduced *photographically* and as each communication is a separate entity, an odd number of pages results in a blank page, which costs almost as much to produce as a full page. Consequently authors are requested to send papers of 2 or 4 pages.

1. Manuscripts should be typed, *single spaced*, using a black ribbon on good quality white bond paper (blue ink, carbons or photocopies will not reproduce satisfactorily). The typist should ensure a clean clear impression on the letters.

2. Special layout sheets, 26.5 cm wide by 38 cm deep, containing the exact typing area, 20 cm by 31 cm, will be supplied on request to any of the Regional Editors.

3. Paper of any size may be used, provided the actual typing area is 20 cm by 31 cm, the margins being provided during reproduction. The title should be all in capital letters, centred on the width of page 1. After a 4-line space, the author's name should be typed, and after a two-line space the author's address should be typed capitalizing the first letter of all main words. A six-line space following the author's address should be left before commencing to type the text of the article. The typing area of page 1, including the title, should be 20 cm wide by 29 cm deep. The typing area of all other pages should be extended to a depth of 31 cm.

4. The drawing of formulae, graphs and other figures should be included in the text, so as not to exceed the specified typing area. Illustrations may be in the form of glossy prints pasted into the appropriate place or else they may be carefully drawn in black ink on to the typing area in a size that will remain legible after a slight reduction. Again ensure that the caption does not become confused with the text.

5. Each page should be numbered lightly at the bottom of the sheet in blue pencil.

6. An assurance should be given that the material has not been published or submitted elsewhere in preliminary form.

7. Preliminary communications should be submitted to the appropriate Regional Editor—see *Submission of manuscripts* above.

## Aims and Scope

(Revised January 1979)

*Molecular Immunology* is primarily devoted to the publication and communication of immunological knowledge which can be delineated at the molecular level. Within this framework are included contributions concerned with the molecular analysis of the cellular components and processes which underlie the biological behavior of cells involved in immune phenomena. In addition, investigations directed to the elucidation of the chemical and physical properties of antibodies and antigens and to the physical-chemical analysis of their interactions fall within the purview of the journal. To maximize its effectiveness as a vehicle for the dissemination of scientific developments in the field of immunology, *Molecular Immunology* will utilize a variety of forms of printed communication as follows:

**Research Reports.** This constitutes the major category of communication. Each report consists of a detailed and complete description of the research problem, the experimental approach and the findings. It must provide new and significant knowledge and contain the information essential for verification of conclusions by other laboratories. Research reports are subject to detailed scrutiny by expert reviewers whose recommendations are the primary determinants of the acceptability for publication of submitted manuscripts. In addition to reports submitted at the initiative of the authors, groups of research reports ('mini-symposia') will be organized in particular areas by a Guest Editor regarded as a leader in the field. The Guest Editor will solicit original reports from a balanced group of laboratories recognized as major contributors to the area. Such reports will also be subject to critical review and will be published four months following receipt by the publisher. It is anticipated that the publication of the invited groups of papers in selected areas will encourage individual contributions to *Molecular Immunology* in these areas.

**Preliminary Communications.** To provide rapid dissemination of timely and significant observations in molecular immunology, *Molecular Immunology* will publish preliminary communications in the form of a photographic reproduction of the original typescript. These manuscripts will also be evaluated by experts and their acceptance will be governed by the recommendations of the reviewers. It is anticipated that manuscripts will be published within eight weeks after approval by a Regional Editor.

**Review Articles.** Review articles will be published at the invitation of the Regional Editors. Anyone interested in submitting a scholarly and critical review of a timely subject in molecular immunology should contact the appropriate Regional Editor.

**Book Reviews.** Publishers or authors who wish to have a book reviewed should contact the Book Review Editor.

**Announcements.** Announcements of forthcoming meetings and conferences of immunological interest should be sent in duplicate to a Regional Editor.

**Summaries of Meetings and Conferences.** Such summaries may be published in the form of reports prepared by selected individuals in attendance.

**Letters to the Editor.** Comments about published papers with the option of simultaneous reply, and commentaries on contemporary issues of immunological interest submitted as Letters to the Editor, will be considered for publication.

**Speculations.** Brief communications devoted to the formulation of challenging new ideas will be considered. They should possess the potential of suggesting novel experiments which meet the criterion of falsifiability (Karl Popper, *The Logic of Scientific Discovery*, 1959).

## THE VITAL LINK BETWEEN SCIENCE AND INDUSTRY....

# ENDEAVOUR

ENDEAVOUR is the vital link between scientific discovery and the application of new knowledge to industry, agriculture and medicine.

In three decades of publication, it has become one of the world's leading and most authoritative reviews of scientific and technological progress. Articles have been commissioned from all quarters of the globe and over 30 Nobel Laureates are included in the distinguished list of contributors.

Recognising the importance of mankind of the continual cross-fertilization of new scientific ideas with current industrial and commercial attitudes, ENDEAVOUR concentrates on topics that are equally relevant to both sides.

Its emphasis is primarily on subjects of global, social, political and economic consequence. Pollution, alternative energy developments, new scientific discoveries and the most significant biological and biochemical issues are covered.

Nobody with an interest in the implications of scientific progress for world development should be without ENDEAVOUR.
